

TRIRIGA Application Platform

Centralization, coordination and communication of workplace information and operations at an enterprise level are critical in today's business environment.

Benefits

- Capture and display all of your critical business information in the required format
- Accommodate your unique business processes
- Integrate business processes and data
- Integrate technology
- Employ cost effective maintenance of custom solutions
- Experience web-based application delivery
- Integrate supply chain partners

How is TRIRIGA different from other solution providers? Not only does TRIRIGA's proven solution automate and streamline the full array of workplace management processes, it also adapts to the way you do business.

Because all of TRIRIGA's products are built on the TRIRIGA Application Platform, you can extend applications, create new processes and customize your interface using the same web-based tools used to create the TRIRIGA Enterprise Workplace Management solution.

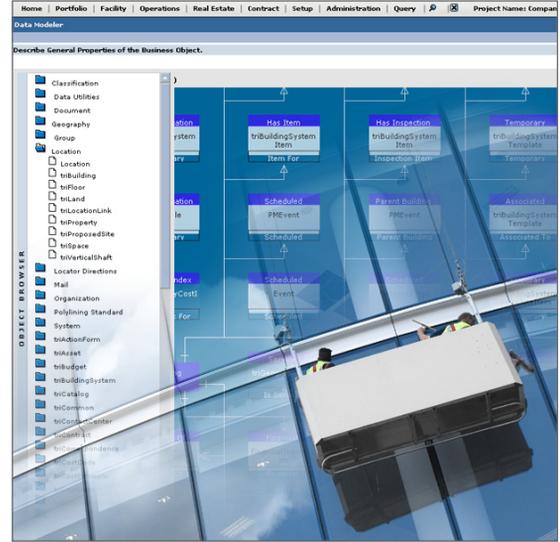

The TRIRIGA Application Platform gives you the flexibility to enhance the TRIRIGA solution through:

- **Business Object Configuration** - Quickly add fields and labels to customize existing business objects - buildings, move requests, real estate leases, etc.; easily create new business objects with inclusive definitions that are directly analogous to real-life, physical objects, such as office and building equipment; graphically model and view all of the relationships that an object has to other system elements, such as assets and employees assigned to spaces, floors or buildings; create actions and events that can trigger subsequent actions, including notifications, approvals or business processes; track the changes that naturally occur in a business object's lifecycle, for example, track a real estate lease through the abstract and approval process to lease administration and termination.
- **Business Process Customization** - Model and automate virtually any process in a graphical, drag-and-drop environment; allow business analysts to determine and define business objects, user interfaces and processes without programming; employ user interfaces created for specific roles, departments or organizations; ensure that only appropriate and relevant data is exposed to each user based on role, organization or geography; guarantee that all of your applications (custom or out-the-box) use a consistent interface.
- **Comprehensive Reporting** - Quickly filter, search, sort, and view requested data; generate dynamic, tailorable reports that are accurate and easy to read; integrate with advanced reporting tools, including Crystal Reports® and Microsoft Excel®.

- **Enterprise Resource Integration** - Connect with other critical business systems - human resources, accounting, customer tracking, etc. - to ensure a smooth flow of real-time information; utilize industry standards and protocols to enable the automation of system to system communication.
- **System Management** - Implement TRIRIGA's applications all at once or using a phased approach over time; create and deploy customized features quickly without hard coding; take advantage of new product functionality and enhancements with minimal impact to existing and customized application behavior.

Centralization, coordination and communication of workplace information and operations at an enterprise level are critical in today's business environment. TRIRIGA Momentum is a technologically advanced, fully integrated, web-based enterprise solution that provides your organization with the power and flexibility to achieve these business objectives.
